

Problem Statement

Title: Digital Marketplace Platform for Direct Farmer–Dealer Vegetable Trading

1. Background

Farmers produce vegetables, fruits, and other crops every day. However, many farmers face difficulties while selling their produce because they depend on middlemen, local markets, or agents. These intermediaries often reduce the profit that farmers receive for their crops. At the same time, dealers, exporters, retailers, and companies are constantly looking for fresh agricultural products directly from farmers, but they do not have a simple digital platform to find reliable suppliers.

Due to the lack of a direct communication system between farmers and dealers, transportation costs increase, price negotiations become inefficient, and trust issues arise between both parties. Farmers also lack access to daily market price tracking, which prevents them from making informed decisions when selling their crops. Therefore, there is a need for a digital system that can directly connect farmers and dealers, reduce unnecessary intermediaries, improve transparency, and simplify the agricultural trading process.

2. Problem

Currently, there is no simple and transparent digital platform where farmers and dealers can directly connect, view crop availability, verify profiles, track prices, and negotiate deals. Because of this limitation, several challenges exist in the agricultural supply chain.

- Farmers struggle to find multiple buyers for their crops and often sell at lower prices.
- Dealers find it difficult to locate verified farmers with available produce.
- Transportation and logistics costs increase due to lack of coordination.
- Farmers do not always know the daily market price of their crops.

- Trust issues arise because buyers cannot easily verify the quality of products or the authenticity of sellers.
- Communication between farmers and dealers is slow and inefficient.

These issues highlight the need for a digital marketplace that improves connectivity, transparency, and efficiency in agricultural trading.

3. Proposed Solution

The proposed solution is to develop a **web application or mobile application** that acts as a **digital marketplace connecting farmers and dealers directly on a single platform**. The platform will allow farmers to list their crops and dealers to browse, evaluate, and purchase agricultural products efficiently.

Farmer Features

Farmers will be able to:

- Register and create a farmer profile
- Verify their identity using **PAN number or other identification details**
- List available crops or vegetables for sale
- Upload **photos of the products** to show the quality
- Mention important details such as:
 - Crop type
 - Quantity available
 - Harvest date
 - Location
 - Expected price
- Use a **crop harvest calendar** to indicate when their crops will be ready for sale
- View **daily price tracking of crops** in the market
- Communicate directly with dealers through a **chat and negotiation system**

Dealer Features

Dealers will be able to:

- Register and create a dealer profile
- Verify their identity using **GST number or business registration details**
- View all crops listed by farmers
- See product photos, quality details, and harvest information
- Track **daily market price trends** of crops
- Quote prices directly for the crops
- Communicate with farmers using an **in-app chat and negotiation feature**
- Specify their business type such as:
 - Local market dealer
 - Exporter
 - Company supplier
- Indicate whether they have **their own transportation facility** or require logistics support

Platform Features

The platform will include several features to improve transparency and efficiency:

- **Multi-language support** so farmers from different regions can easily use the platform
- **Daily crop price tracking** to display current market trends
- **Verified profiles** using PAN number for farmers and GST number for dealers to reduce fraud
- **Rating and review system** for farmers and dealers to build trust
- **Chat and negotiation system** for direct communication between buyers and sellers
- **Crop availability map** that shows farmers and available crops based on location
- **Logistics and transportation matching**, where dealers can indicate if they have their own transport or require delivery support
- Dealer profiles displaying:
 - Years of experience
 - Business type
 - Ratings and reviews
- Advanced search filters based on:
 - Crop type
 - Location
 - Quantity
 - Price
 - Availability date

4. Expected Benefits

This platform will provide several benefits to both farmers and dealers:

- Reduce transportation and logistics costs
- Minimize dependency on middlemen
- Improve price transparency through daily market price tracking
- Allow farmers to connect with multiple buyers
- Help dealers easily find fresh crops directly from farmers
- Improve trust through verified profiles and rating systems
- Enable efficient communication and faster negotiation
- Create a more organized and digital agricultural marketplace

5. Impact

The system will improve the agricultural supply chain by making crop trading **more efficient, transparent, and accessible**. By enabling direct interaction between farmers and dealers, the platform can increase farmer profits, reduce wastage of agricultural products, and streamline the process of buying and selling crops.

The platform can support various stakeholders in the agricultural ecosystem, including:

- Small and medium-scale farmers
- Vegetable and fruit traders
- Agricultural exporters
- Food processing companies
- Local vegetable markets

Overall, this digital marketplace can contribute to a more sustainable and efficient agricultural trading ecosystem.

State-wise Land Record Names & Portals (2026)

State	Local Name of Record	Official Portal
Andhra Pradesh	Adangal / 1B	MeeBhoomi
Telangana	Pahani / Adangal	Dharani
Maharashtra	7/12 (Saat-Bara)	Mahabhulekh
Uttar Pradesh	Khatauni / Bhulekh	UP Bhulekh
Tamil Nadu	Patta / Chitta	Anyalagam / Tamil Nilam
Punjab/Haryana	Jamabandi / Fard	[suspicious link removed]
Gujarat	AnyRoR (7/12 & 8A)	AnyRoR
Rajasthan	Apna Khata / Jamabandi	Apna Khata
West Bengal	Khatian & Chitta	Banglarbhumii
Bihar	Jamabandi	Bihar Bhumi
